Designer Sibylle Hagmann

Styles and Weights 14

Format Cross Platform OpenType / Web / App

Publication Date 2019 / V 0.1

About The Utile type collection consists of two sets of styles, one for smaller set typography and one indented for display enabling corresponding use for various sizes and applications. The optical scale characteristics differ in a few ways: Utile (Text), featuring a sturdy letter build, is spaced more openly with compensating ink traps, whereas the contrasted Utile Display is closer spaced with re-proportioned letters, slightly extended

ascenders and descenders, and close to non-existing ink traps. Utile's incised stem modulation, uniquely asymmetrical in its application, attempts to maintain a balancing act between swelled strokes and the absence of such. A family of fourteen styles offers a balanced range for identity-branding, editorial and advertising for print and screen.

UTILE LIGHT 6/8 PT

The first step in making ready to print a manuscript is to find out how many words there are in it, what kind of type to use, how much "leading" or space between the lines there shall be, and what shall be the size of the page. In deciding these questions, considerable thinking has to be done. If the manuscript is a short story by a popular author, it may be printed with wide margins and wide leading in order to make a book of fair size. If it is a lengthy manuscript which will be likely to sell at a moderate but not a high price, it is best to use only as much leading as is necessary to make the line stand out clearly, and to print with a margin not so wide as to increase the expense of the book. The printer prints a sample of the page decided upon, any desired changes are made, and then the making of the book begins. The type is kept in a case at which the compositor stands. This case is divided into shallow compartments, each compartment containing a great many e's or m's as the case may be. The "upper case" contains capitals; the "lower case," small letters. Those letters which are used most often are put where the compositor can reach them most readily. He stands before his case with a "composing stick"

If the manuscript is a short story by a popular author, it may be printed with wide margins and wide leading in order to make a book of fair size. If it is a lengthy manuscript which will be likely to sell at a moderate but not a high price, it is best to use only as much leading as is necessary to make the line stand out clearly, and to print with a margin not so wide as to increase the expense of the book. The printer prints a sample of the page decided upon, any desired changes are made, and then the making of the book begins. The type is kept in a case at which the compositor stands. This case is divided into shallow compartments, each compartment containing a great many e's or m's as the case may be. The "upper case" contains capitals; the "lower case," small letters. Those letters which are used most often are put where the

UTILE SEMIBOLD 9/12 PT

The first step in making ready to print a manuscript is to find out how many words there are in it, what kind of type to use, how much "leading" or space between the lines there shall be, and what shall be the size of the page. In deciding these questions, considerable thinking has to be done. If the manuscript is a short story by a popular author, it may be printed with wide margins and wide leading in order to make a book of fair size. If it is a lengthy manuscript which will be likely to sell at a moderate but not a high price, it is best to use only as much leading as is necessary to make the line stand out clearly, and to print with a margin not so wide as to increase the expense of the book. UTILE LIGHT / LIGHT ITALIC

The first step in making ready to print a manuscript is to find out how many words there are in it, what kind of type to use, how much "leading" or space between the lines there shall be, and what shall be the size of the page. In deciding these questions, considerable thinking has to be done. If the manuscript is a short story by a popular author, it may be printed with wide margins and wide leading in order to make a book of fair size. If it is a lengthy manuscript which will be likely to sell at a moderate but not a high price, it is best to use only as much leading as is necessary to make the line stand out clearly, and to print with a margin not so wide as to increase the expense of the book. *The printer prints a sample of the page decided upon, any desired changes are made, and then the making of the book begins.* The type is kept in a case at which the compositor stands. This case is divided into shallow compartments, each compartment containing a great many e's or m's as the case may be. The "upper case" contains capitals; the "lower case," small letters. Those letters which are used most often are put where the compositor can reach them most readily. He stands before his case with a "composing stick" in his hand. This "stick" is a little iron frame with a slide at the side, so that the line can be made of any length desired. The workman soon learns where each letter is, and even an apprentice can set the type in his stick reasonably rapidly. On one side of every piece of type there is a groove, so that he can tell by touch whether it is right side up or not. He must look out especially to make his right-hand margins regular. You will notice in books that the lines are all of the same length, although they do not contain the same number of letters. The compositor brings this about by arranging his words and spaces skillfully. The spaces must be as nearly as possible of the same length, and yet the line must be properly filled. If a line is too full, he can sometimes place the last syllable on the following line; if it is not full enough, he can borrow a syllable, and he can at least divide his space so evenly that the line will not look as if it were broken in two. Not many years ago all type was set in this manner; but several machines have now been invented which will do this work. In one of the best of them the operator sits before a keyboard much like that of a typewriter. When he presses key a, for instance, a mould or matrix of the letter a is set free from a tube of a's, and slides down to its place in the stick. At the end of the line, the matrices forming it are carried in front of a slot where melted type metal from a reservoir meets them. Thus a cast is made of the matrices,

This case is divided into shallow compartments, each compartment containing a great many e's or m's as the case may be. The "upper case" contains capitals; the "lower case," small letters. Those letters which are used most often are put where the compositor can reach them most readily. He stands before his case with a "composing stick" in his hand. This "stick" is a little iron frame with a slide at the side, so that the line can be made of any length desired. The workman soon learns where each letter is, and even an apprentice can set the type in his stick reasonably rapidly. On one side of every piece of type there is a groove, so that he can tell by touch whether it is right side up or not. He must look out especially to make his right-hand margins regular. You will notice in books that the lines are all of the same length, although they do not contain the same number of letters. The compositor brings this about by arranging his words and spaces skillfully. The spaces must be as nearly as possible of the same length, and yet the line must be properly filled. *If a line is too full, he can sometimes place the last syllable on the following line; if it is not full enough, he can borrow a syllable, and he can at least divide his space so evenly that the line will not look as if it were broken in two. Not many years ago all type was set in this manner; but several machines have now been invented which will do this work.* In one of the best of them the operator sits before a keyboard much like that of a typewriter. When he presses key a, for instance, a mould or matrix of the letter a is set free from a tube of a's, and slides down to its place in the stick. At the end of the line, the matrices forming it are carried in front of a slot where melted type metal from a reservoir

UTILE LIGHT / LIGHT ITALIC

The first step in making ready to print a manuscript is to find out how many words there are in it, what kind of type to use, how much "leading" or space between the lines there shall be, and what shall be the size of the page. In deciding these questions, considerable thinking has to be done. If the manuscript is a short story by a popular author, it may be printed with wide margins and wide leading in order to make a book of fair size. If it is a lengthy manuscript which will be likely to sell at a moderate but not a high price, it is best to use only as much leading as is necessary to make the line stand out clearly, and to print with a margin not so wide as to increase the expense of the book. The printer prints a sample of the page decided upon, any desired changes are made, and then the making of the book begins. The type is kept in a case at which the compositor stands. This case is divided into shallow compartments, each compartment containing a great many e's or m's as the case may be. The "upper case" contains capitals; the "lower case," small letters. *Those letters which are used most often are put where the compositor can reach them most readily. Návštěvnost hradů, zámků a dalších památek ve správě státu letos překonala rekordní počet pět milionů lidí. Počet návštěvníků je nejvyšší nejméně od roku 2009, od kdy Národní památkový ústav pracuje se současným systémem evidence. „V tuto chvíli je pětimilionová hranice jistě překročena, protože údaje jsou z konce listopadu a lidé na památky, které jsou otevřené, stále chodí. Přesné součty za celý rok budou k dispozici kolem 10. ledna,“ doplnila Jana Tichá, mluvčí NPÚ. Letos rekordní počet návštěvníků NPÚ hlásil už na konci září, kdy evidoval 4,6 milionu lidí. Rostoucí návštěvnost NPÚ připisuje doprovodným programům, které lidi na hrady a zámky lákají za oživením, atmosférou a uměním, nejen za klasickými prohlídkami. I ty však jsou stále oblíbené a počet návštěvníků na nich neklesá. Více turistů přineslo letos do rozpočtu NPÚ 30 milionů korun navíc. Opraví se za ně fasády zámku Mnichovo Hradiště, kostel svatého Víta v Zahrádce nebo papírové tapety na

I mødelokaler og korridorer i Le Bourget i det nordøstlige Paris forsøger politikere og embedsmænd fra alverdens lande i disse dage at finde sammen om en global aftale, der kan medvirke til at sikre verden mod klimaforandringer af katastrofale dimensioner. Mangecifrede milliardbeløb er på spil, og fortrolighed er nøgleordet, når de afgørende forhandlinger finder sted ved COP21-klimatopmødet. Men de delegerede ved konferencen kan langt fra vide sig sikre på, at ingen lytter og læser med. Ifølge Peter Kruse, der er partner og sikkerhedsekspert i CSIS, er COP21 en højriskobegivenhed for spionage. »På en skala fra et til 10 er COP21 et klart 10-tal, fordi der er rigtig mange, man gerne vil have informationer fra,« siger han. »En koncentration af så mange mennesker, der i forvejen er på efterretningstjenesternes interesselister, giver en høj sandsynlighed for at forskellige efterretningstjenester vil trænge sig på og gøre, hvad de kan for at lytte med.«

Entre les différentes places de vente aux enchères, il y a spécialisation qui s'est, au fil du temps, institutionnalisée. New York, Londres et Hongkong sont les places les plus généralistes et captent les ventes de prestige. Genève s'est fait une expertise sur la joaillerie et les montres. La France est reconnue pour la vente d'art asiatique en Europe, ainsi que pour la vente d'art africain ou tribal. De même, elle a aussi une expertise pour les ventes de livres, de manuscrits et de bandes dessinées. Chez Christie's, on s'occupe aussi des ventes de vin, dont celle des Hospices de Beaune qui ont rapporté plus de 10 millions d'euros, cette année. En développant, de son côté, le marché des voitures de collection, Artcurial a su découvrir un filon sur lequel lorgnent désormais ses concurrents. Sur les 14 ventes millionnaires d'Artcurial, 8 correspondent à des voitures. En 2015, les maisons de ventes aux enchères se sont renforcées. Cette performance est d'autant plus remarquable que celle-ci

Trägt der Reisende ein Narrenkostüm? Zählen die seltsamen Holzbretter und der Stock zur Verkleidung? Es ist der Fastnachtssonntag 1891, als Dr. Robert Pilet am Bahnhof Titisee aus dem Zug steigt. Er macht sich auf den Weg zum Feldberg und sorgt bei den Einheimischen für große Verwunderung. Zwei Meter Neuschnee sollen an diesem Tag auf dem 1493 Meter hohen Gipfel gelegen haben, wissen die Chronisten später zu berichten. Mehr als drei Stunden wird der französische Diplomat auf Skiern für die zehn Kilometer lange Wegestrecke bis zum Hotel "Feldberger Hof" brauchen. Über 1000 Höhenmeter stapft Pilet durch die Winterwelt bergauf. Fünf Stunden später steht der 33 Jahre alte Globetrotter auf dem Gipfel. In der Dämmerung des Nachmittags kehrt der Pionier im Hotel ein und schreibt ins Gästebuch: "R. Pilet, Dr., Heidelberg, Februar 8. 1891, mit Norwegischen Schneeschuhen". "Das ist der Beginn des Skilaufes im Schwarzwald vor 125 Jahren

In versione live Heidi arrivò sul piccolo schermo per due volte, la prima nei 26 episodi prodotti da Germania e Austria nel 1978 (con una giovanissima Katharina Böhm, celebre in Italia come Livia di Montalbano, nei panni dell'amica di Heidi, Clara), la seconda nel 1993 per la regia di Michael Ray Rhodes. Per avere una misura della popolarità internazionale raggiunta dal personaggio, basti pensare al caso dell'«Heidi Bowl» scoppiato negli Stati Uniti nel 1968, quando la rete televisiva NBC tagliò l'ultimo cruciale minuto di partita dell' American Football League per mandare in onda Heidi di Delbert Mann, con la figlia di Blake Edwards. Per gestire gli infuriati telespettatori fu istituita una linea d'emergenza, la cosiddetta «Heidi Line», per rispondere alle proteste dei tifosi. Non fu quella l'unica volta che la «tenera, piccola» Heidi finì al centro delle polemiche. Nel 2001 il regista svizzero Markus Imboden tentò una versione moderna della storia, attirandosi le ire dei conservatori

Esperaba Muñoz Rojas la muerte porque todos los amigos de su vida se habían ido marchando. Unos con prisas crueles, otros reposados en la senectud, dejando la escena poco a poco y en silencio. Él era el escritor que conectaba dos mundos, el de ayer y el de ahora mismo. El hombre que relataba anécdotas luminosas de Manuel Altolaguirre, Emilio Prados, Moreno Villa o José María Hinojosa en aquella Málaga anterior a la Guerra Civil. Y que luego se hizo grande con los de su generación, la del 36 con Leopoldo Panero, Luis Felipe Vivanco, Luis Rosales o Miguel Hernández. Era el poeta que hablaba como desde el otro lado, contando deliciosas historias de hombres que ya estaban en los manuales de Historia, pero que él los acercaba con la intimidad de los que han compartido noches de versos acerados. Las cosas del campo es su gran libro. Un monumento a la prosa poética en el que el paisaje se convierte en la verdadera autobiografía de un hombre. Un paisaje
